

COMPANY PROFILE

KIEL Technologies Limited is a strategic tech player in the tech ecosystem that provides a wide range of globally relevant and in-demand services to its audience. With its office located in Nigeria and Kenya. Kiel has touched the world through the power of tech and innovative tech solutions.

Part of the core of her operations is Vision 365, a team of young tech practitioners and gurus who work round the clock in a 24-7 IT lab renovating, innovating and creating the solutions for tomorrow. We realize the instrumentality of tech and have thus leveraged its cross-disciplinary relevance to touch our world.

VISION 365

About two years, the team at KIEL redefined its operational model from a reactive to a proactive one. This strategic shift in focus birthed the need to have an ongoing in-house incubation hub that is tasked with churning out state-of-the-art futuristic solutions to drive the nation and the world. We constituted a team of willing and enthusiastic techpreneurs that have long sought the opportunity to harness their potentials in a fertile and friendly environment.

Our cooperate meshwork comprises key partnerships with financial institutions and grant-awarding organizations who play a massive role in financially endorsing this team.

Of our many projects, one stand to mind- VIRTUAL WORLD- a hyper simulated blend of virtual and augmented reality that provides the user with a real-life experience in their biological processes. Take for instance, Tommy has a liver infection, the virtual world will grant him access into a world where his real liver is substituted for a simulated liver that now runs his entire body. For the duration of the loop, Tommy will live the life of someone without any liver condition. The final goal is for Tommy to enjoy real-life functions of his liver, not just in the virtual world.

Although this project is far from being released, the trial versions have had encouraging results.

OUR SERVICES

IT SUPPORT

Kiel's IT service dubbed HELPLINE provides a 24-hour support service for existing and prospective clients and serves as the companies first respondent service to our client. As a principle, we treat intending clients with equal regard and respect as we do our top clients. All issues, ranging from security, software freezes to file server management. In the past year, we have recruited more staff to handle our phones and email services due to the

surge in the reliance on virtual and online service delivery.

CLOUD SERVICES

At Kiel, we provide third party cloud services: we assist offices set-up a virtual workspace that affords their staff the luxury of accessing the office database from any device. Also, we provide advisory and maintenance services for companies. Our services are limited to Azure and Amazon Cloud Services. The impact of cloud services is enormous: Less maintenance cost, space economy, interaction and sharing, and an overall increase in yearly turnover.
